## ABSTRACT

0048 A method for semiconductor device feature development using a bi-layer photoresist including providing a non-silicon containing photoresist layer over a substrate; providing a silicon containing photoresist layer over the non-silicon containing photoresist layer; exposing an exposure surface of the silicon containing photoresist layer to an activating light source said exposure surface defined by an overlying pattern according to a photolithographic process; developing the silicon containing photoresist layer according to a photolithographic process reveal a portion the non-silicon containing to layer; and, 'dry developing said non-silicon photoresist containing photoresist layer in a plasma reactor by igniting a plasma from an ambient mixture including at least nitrogen and oxygen.
